January 3, 2025

Dear Valued Customer:

ADC has reviewed the materials used to produce our products and found that they do not contain any of the substances shown on the complete EPA list of PFAS. PFAS as defined by the EPA are synthetic organic compounds that do not occur naturally in the environment as defined below:

The EPA has defined “PFAS” as a chemical substance that contains at least one of the following three structures:

$R-(CF_2)-CF(R')R''$, where both the CF_2 and CF moieties are saturated carbons.

$R-CF_2OCF_2-R'$, where R and R' can either be F , O , or saturated carbons.

$CF_3C(CF_3)R'R''$, where R' and R'' can either be F or saturated carbons.

The strong carbon-fluorine bonds of PFAS make some of them resistant to degradation and thus highly persistent in the environment.

On January 25, 2024, EPA held a webinar concerning the Agency’s “October 2023 per- and polyfluoroalkyl substances (PFAS) reporting rule” under Section 8(a)(7) of the Toxic Substances Control Act (TSCA). The webinar provided an overview of the TSCA Section 8(a)(7) rule’s requirements to which we are compliant.

As of the date of this letter, Advanced Digital Cable, Inc. has performed its due diligence in order to ensure that our products fully comply with, the EPA/TSCA “Act” and do not contain any of these substances as defined by the EPA.

Sincerely:

Steve Tant
Quality Manager
